

# BAGGING PLATFORM AND GUARDING, BALLANCE, PUKEKOHE

**PRODUCT USED: FRP PLATFORM ASSEMBLY AND GUARDING**

## THE PROJECT

New mechanical equipment had been installed during an upgrade of the Ballance bagging plant in Pukekohe. The client requested guidance from FRP Products Ltd from a safety point of view. We designed, fabricated and installed access platforms and distance guarding to meet New Zealand compliance standards. FRP materials were used for the structure, which was a key element to reduce fabrication/installation time and overall contract costs. The platform was fabricated in the FRP Products Ltd warehouse and transported in three pre-assembled parts to allow quick, final assembly onsite. The total onsite time for our partner installers was four days.
